

Product Overview

Goldfish is a powerful software solution that streamlines seafood trade compliance and due diligence, cutting data entry and review time by 80% or more. It functions as a standalone product or in concert with existing ERP/traceability systems and covers seven US seafood trade regulations:

- Seafood Import Monitoring Program (SIMP)
- Tuna Tracking and Verification Program (TTVP)
- Highly Migratory Species Program (HMS)
- Section 609 Shrimp Imports Program
- Certification of Admissibility
- Marine Mammal Protection Act Imports Rule
- Antarctic Living Marine Resources Program

Proprietary Global Databases, coming soon as microservices for enterprise customers:

- **Fishing Vessels:** 350,000+ authorized vessels, all IUU vessel blacklists
- **Fisheries:** 15,000+ index of government-recognized fisheries, which are specific associations of species, fishing gear, authorizing nation and fishing area

Key Features

Identify and Fix Errors

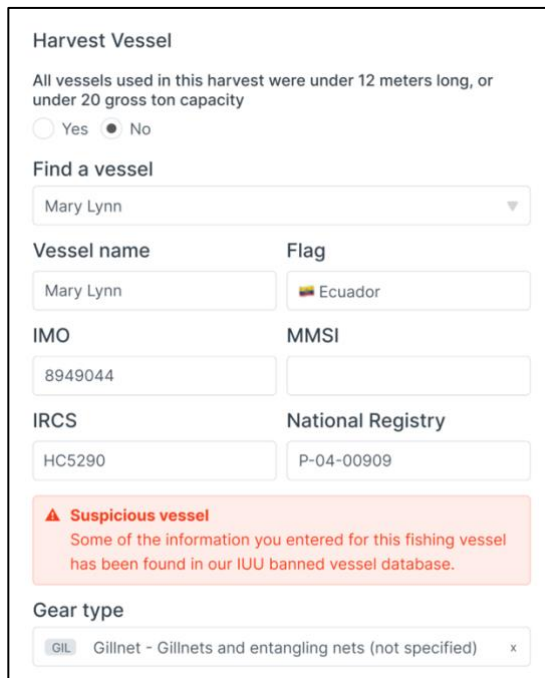

Goldfish's dynamic user interface guides you through the data requirements needed for all applicable regulations in one intuitive workflow – no more looking up codes or entering the same information on multiple documents. Predictive text, suggested inputs and dropdown menus minimize errors in data entry and flag inconsistencies so you can see and fix them right away.

Real-Time Due Diligence

Goldfish cross-references your sourcing data against global fisheries and vessel databases, flagging issues that could lead to your product being held at the border. Our thorough documentation shows enforcement authorities that you have exceeded due diligence expectations, either as spot checks or for every product.

Data Portability

Easily share your data across in whatever format works best for your customers and partners, as we support JSON, CSV, PDF files and hyperlinks/QR codes.

Harvest Vessel

All vessels used in this harvest were under 12 meters long, or under 20 gross ton capacity

Some of the information you entered for this fishing vessel has been found in our IUU banned vessel database.

Gear type

GL Gillnet - Gillnets and entangling nets (not specified) x

Flag for a blacklisted IUU fishing vessel.

Accelerated Imports, Audits, and Supplier Vetting

Enjoy the benefits of traceability without the investment. Goldfish can store your data and records and make it readily available to auditors, importers, customs brokers etc. for easy processing. You can also use Goldfish to quickly vet compliance of potential suppliers, allowing you to expand your sourcing options with lower risk.

Efficient Documentation Management

Goldfish suggests and collects the regulatory documents required for your specific imports. By providing contextual guidance, the software simplifies the documentation process, reducing the chance of missing any essential paperwork.

Admissibility Requirements
General requirements for all imports to USA from Chile

Tuna Tracking Verification Program (TTVP)
NOAA form 370 - Fisheries Certificate of Origin
REQUIRED FOR US IMPORT [Attach now](#)

Seafood Import Monitoring Program (SIMP)
Chain of Custody - collect and retain supply chain, harvest, and import documentation for your records.
You may be asked to provide these documents to the government.
